<> Start writing code

Start a new repository for phsg-mf

A repository contains all of your project's files, revision history, and collaborator discussion.

Repository name *

Public
Anyone on the internet can see this repository

Private
You choose who can see and commit to this repository

Create a new repository

4. Erstellung eines neuen Repository

Create a new repository

A repository contains all project files, including the revision history. Already have a project repository elsewhere? [Import a repository.](#)

Required fields are marked with an asterisk (*).

Owner * Repository name *

 phsg-mf /

✔ Your new repository will be created as **Bescheide-STU**.
The repository name can only contain ASCII letters, digits, and the characters `.`, `-`, and `_`.

Great repository names are short and memorable. Need inspiration? How about [super-duper-octo-sniffle](#) ?

Description (optional)

-  Public
Anyone on the internet can see this repository. You choose who can commit.
-  Private
You choose who can see and commit to this repository.

Initialize this repository with:

- Add a README file
This is where you can write a long description for your project. [Learn more about READMEs.](#)

Add .gitignore

Choose which files not to track from a list of templates. [Learn more about ignoring files.](#)

Choose a license

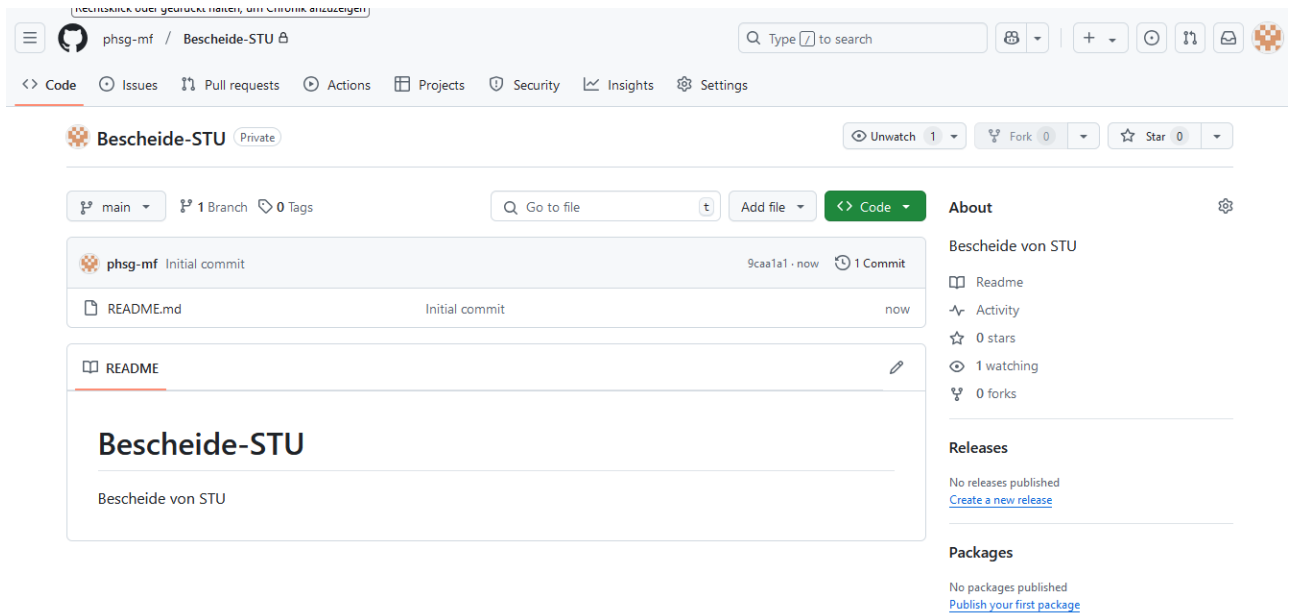

A license tells others what they can and can't do with your code. [Learn more about licenses.](#)

This will set  main as the default branch. Change the default name in your [settings](#).

 You are creating a private repository in your personal account.
